

# Print Farm Pro

## Overview

Print Farm Pro is a software that enables you to connect all your devices to the PrintWatch cloud for real-time 3D print monitoring with AI. The package removes the need for individual hardware for every printer with a centralized host computer that allows you to connect any number of cameras or video sources that monitor any number of printers. Print Farm Pro allows you to streamline your operation, reduce wasted time and material, and provide assurance that the print jobs are under control.

## Features

- Centralized hardware
- Real-time failure detection
- Real-time anomaly detection for preventative maintenance
- Scalability for any number of printers
- Monitor multiple printers with a single camera
- Real-time notification
- Cloud connection

## Benefits

- Reduce wasted time and material
- Increase efficiency
- Operation streamlining
- Reduce downtime due to machine failure
- Control from anywhere in the world

## Technical Specifications

Print Farm Pro Specifications	
Camera streaming protocol	RTSP, MJPEG, HTTP/S
Minimum recommended camera resolution (pixels)	1280 x 720
Minimum recommended camera resolution per printer (pixels)	600 x 600
Minimum recommended internet speed (MB/s)	5
Hardware operating system	Windows 11
Communication protocols	Ethernet/IP, WiFi
